DETAILED ACTION

Priority

Acknowledgment is made of applicant's claim for foreign priority based on a plant breeder's rights (PBR) application filed in The Netherlands on 14 March 2003. It is noted, however, that applicant has not filed a certified copy of the plant breeder's rights application as required by 35 U.S.C. 119(b) and (f).

Objection to the Disclosure

37 CFR 1.163

The following is a quotation of section (a) of 37 CFR 1.163:

(a) The specification must contain as full and complete a disclosure as possible of the plant and the characteristics thereof that distinguish the same over related known varieties, and its antecedents, and must particularly point out where and in what manner the variety of plant has been asexually reproduced. In the case of a newly found plant, the specification must particularly point out the location and character of the area where the plant was discovered.

35 USC § 112

The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

As specific to United States Plant Patent applications, the specifics of 37 CFR 1.164 (reproduced

below) are controlling:

The claim shall be in formal terms to the new and distinct variety of the specified plant as described and illustrated, and may also recite the principal distinguishing characteristics. More than one claim is not permitted.

Page 3

Art Unit: 1661

In plant applications filed under 35 U.S.C. 161, the requirements of 35 U.S.C. are limited. The following is a quotation of 35 U.S.C. 162:

No plant patent shall be declared invalid for noncompliance with section 112 of this title if the description is as complete as is reasonably possible. The claim in the specification shall be in formal terms to the plant shown and described.

The disclosure is objected to under 37 CFR 1.163 (a) and under 35 U.S.C. 112, first paragraph, because the specification presents less than a full, clear and complete botanical description of the plant and the characteristics which define same per se and which distinguish the plant from related known cultivars and antecedents.

More specifically:

- A. Applicant should specify that the claimed plant originated as a single plant from the stated cross. The cultivar must originate as a single plant to qualify for patent protection under 35 U.S.C. § 161 et seq.
- B. Applicant should clearly specify which color chart was used for the color descriptions set forth in the Specification. At present, the application states (RHS Color Chart) was used for the leaf coloration. A suggested addition might be: -- In the following description, color references are made to The Royal Horticultural Society Colour Chart, XX Edition, except where general terms of ordinary dictionary significance are used. –
- C. If possible, in the Brief Summary of the Invention, applicant should compare the claimed plant to its parent cultivar and to the most similar cultivar to the claimed plant known to the inventor. Comparisons stating how the claimed plant differs from other known cultivars are standard in United States Plant Patent Applications and lend more substantive meaning to the recitations regarding size, color, etc.

Art Unit: 1661

D. Page 6, if possible, applicant should indicate the cultural and light conditions the photograph of the plant were taken under and the location where the photographs were taken. See United States Plant Patent Number 15,174, Col. 2, lines 7-22 for an example.

- E. As the claimed plant produces flowers (page 5 states the claimed plant sets seed, therefore it must produce flowers), a photograph of the flowers should be provided. The claim is to the plant, as illustrated and described and a photograph is needed to provide as complete at botanical description of the claimed plant as is reasonably possible. Applicant is reminded to amend the Brief Description of the Drawings accordingly if an additional photograph is provided.
- F. Page 7, applicant should remove the reference to "Figs. 1". The Figures are described in the Brief Description of the Drawings.
- G. Page 7, applicant should specify the cultural conditions the claimed plant, as described in the Botanical Description of the Plant, was grown under. For example, applicant should provide the location of culture, whether it was indoors or outdoors, whether or not any photoperiodic treatment was given to the claimed plant, as well as typical and observed day and night temperatures, light levels and rainfall, if applicable.
- H. Applicant should specify the name and patent status of the parent plant, if known, or set forth that it is an unnamed and unpatented proprietary cultivar, if accurate
- I. Applicant should describe the roots of the claimed plant.

Page 4

Art Unit: 1661

J. Applicant should specify whether or not the rooted cuttings were pinched in the production of the claimed plant. Pinching off the terminal apices increases branching of the plant and would alter the height to width ratio of the plant as observed.

Page 5

- K. Applicant should describe the typical and observed number of branches as well as their color, length, diameter and internode lengths.
- L. Applicant should provide the typical and observed size at which the claimed plant flowers, if known.
- M. Applicant should provide more detailed botanical description for the leaves of the claimed plant. The leaves are presently described as "heart-shaped". The appropriate botanical term for "heart-shaped" is cordate --. Applicant should also provide the leaf apex, base and margin shapes, as well as provide the upper and lower leaf surface coloration and the typical and observed pattern of variegation. Applicant also states that "the leaves are covered with a gray RHS 188D powder". Applicant should specify whether this is a waxy bloom, a form of pubescence, or something else entirely, as it is not possible to tell what the "powder" is from the photograph provided.
- N. Applicant must describe the flowers, reproductive organs and seeds of the claimed plant. At present, applicant describes the seeds as "very small". Applicant should provide the following information:
 - Flower type and habit.
 - Natural Flowering season.

Application/Control Number: 10/733,743 Page 6

Art Unit: 1661

o *Kalanchoe sp.* are normally short-day plants, so this information is relevant to the culture and distinctiveness of the claimed plant.

- Time to flower.
 - o The number of weeks of photoperiodic treatment needed to induce flowering in the claimed plant, if applicable.
- Rate and pattern of flower opening along the inflorescence.
- How long flowers last on the plant and as cut flowers.
- Flower diameter and depth.
- Number of flowers.
- Flower bud shape, length, diameter and color with reference to the employed color chart.
- Petal number, shape, apex shape, base, shape, margin shape, texture and upper and lower
 petal surface coloration with reference to the employed color chart.
- Information about the Reproductive organs.
 - Number of stamens and ovaries.
 - o Anther shape and color.
 - o Filament color, in general terms.
 - o Pollen color and amount.
 - o Pistil number
 - o Style color in general terms.
 - o Stigma shape.
 - o Ovary size and ovary color.
- Information about the seeds.
 - Number of seeds.
 - Seed color.
 - Seed shape.

Application/Control Number: 10/733,743 Page 7

Art Unit: 1661

o Whether or not the seed is fertile.

O. Applicant should specify whether or not the claimed plant has been observed to be resistant to any known diseases of *Kalanchoe* and should provide the typical and observed high

and low temperature tolerance of the claimed plant.

The above listing may not be complete. Applicant should carefully compare the claimed

plant with the botanical descriptions set forth in the specification to ensure completeness and

accuracy and to distinguish the plant within this expanding market class. Any further botanical

information should be imported into the specification, as should any additional or corrected

information relative to same.

Claim Rejection
35 USC § 112, 1st and 2nd Paragraphs

Claim 1 is rejected under 35 U.S.C. 112, first and second paragraphs as not being supported by a clear and complete botanical description of the plant for reasons set forth in the

Objection to the Disclosure Section above.

Conclusion

No claim is allowed.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Wendy C. Haas whose telephone number is (571) 272-0976. The examiner can normally be reached on Monday through Friday 9:00 to 5:30.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Andrew Wang can be reached on (571) 272-0811. The fax phone number for the organization where this application or proceeding is assigned is (571) 273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
